The invention relates to novel HER-2 (herstatin-2) antagonist particularly a polypeptide that binds to the extracellular domain (ECD) of HER-2 at a site that is different from the binding site of humanised antibody, Herceptin, at an affinity of at least 10'8. The present invention is based upon the initial discovery of an alternative HER-2 mRNA transcript with 274 bp insert of intron 8. The translation product of the alternative transmentation 8. The translation product of the alternative transmentation 8. The translation broduct of the alternative transmentation 8. The translation broduct of BSHER-2 but containing DOI) I I of the p185HER-2 and the novel BCDIIIa. The ECDIIIA-containing DOI) I I of the p185HER-2 and thus antagonise the ECDIIIA-containing DOI) is 10 the p185HER-2 and thus antagonise the ECDIIIA-containing polypeptides bind tightly to, and thus antagonise of the HER-2 receptor. The peptides, which bind to an HER-2 ECDIIIa variant encoded cold tumours. The present sequence is p68HER-2 ECDIIIa variant encoded is not shown in the specification but is derived from HER-2 intron 8 encoded ECDIIIa sequence given in figure 8 (AAE09184)
                                                                                                                 HBR-2; herstatin; antagonist; extracellular domain; BCD; Herceptin; solid tumour; cancer; polymorphism; cytostatic; gene therapy; p68HBR-2; ECDIIIa; variant.
                                                                                     Human p68HER-2 ECDIIIa variant 11 encoded by HER-2 intron 8.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Example 11; Page; 61pp; English.

The invention relates to novel HER-2 (herstatin-2) antagonist particularly a polypeptide that binds to the extracellular domain (ECD) of HER-2 at a site that is different from the binding site of humanised antibody, Herceptin, at an affinity of at least 10°8. The present invention is based upon the initial discovery of an alternative HER-2 mend transcript with 274 bp insert of intron 8. The translation product of the alternative transcript is a truncated HER-2 protein designated p68HER-2 which lacks the transmembrane and intracellular domains of 198HER-2 which lacks the transmembrane and intracellular domains of 198HER-2 which lacks the paperides bind tightly to, and thus antagonise the HER-2 receptor. The peptides bind tightly to, and thus antagonise the HER-2 receptor. The peptides, which bind to an HER-2 ECD, and the containing polypeptides bind tightly to, and thus antagonise to much a capture solid tumnours. The present sequence is human p68HER-2 partial protein containing ECDIIIa variant sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New polypeptide, which binds to the extracellular domain of HER-2 for the treatment of hard tumors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          62

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention relates to a method for treating a solid tumour characterised by endothelial growth factor receptor (EGRR) expression. The method involves administering an agent that binds to an extracellular domain (ECD) of EGR. The invention also relates to an acturally occurring inhibitor of HER-2 receptor tyrosine kinase called herstatin. The corpression of herstatin with pil8shER2 causes a striking reduction in cell growth that corresponds with suppression of p185 autophosphorylation. The method or a pharmaceutical composition is useful for treating a solid cumour (selected from squamous cell carcinoma, ingo carcinoma, colon carcinoma and glial cell tumour) characterised by EGFR expression. The present sequence is HER2 protein containing extracellular domain.
                                                                                                                                                                                                                                                                           Endothelial growth factor receptor; EGFR; tumour; cytostatic; herstatin; HER-2 receptor tyrosine kinase; squamous cell carcinoma; lung; colon; glial cell tumour; cell growth.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Treating solid tumor characterized by expression of endothelial growth factor receptor, involves administering recombinant herstatin that binds to extracellular domain of the endothelial growth factor receptor.

The invention relates to novel HER-2 (herstatin-2) antagonist

particularly a polypeptide that binds to the extracellular domain (ECD)

of HER-2 at a site that is different from the binding site of humanised

antibody, Herceptin, at an affinity of at least 10.8 The present
invention is based upon the initial discovery of an alternative HER-2

ment transcript with 274 bp insert of intron 8. The translation product
of the alternative transcript is a truncated HER-2 protein designated
p68HER-2 but contains ECD I, II of the p185HER-2 and the novel ECDIIIa-
The ECDIIIA-containing polypeptides bind tightly to, and thus antagonise
the HER-2 receptor. The peptides, which bind to an HER-2 ECD, and the
nucleic acids encoding these are useful to treat, diagnose and identify
solid tumours. The present sequence is p68HER-2 ECDIIIA variant encoded
by polymorphic form of human HER-2 intron 8. Note: The present sequence
is not shown in the specification but is derived from HER-2 intron 8
encoded ECDIIIa sequence given in figure 8 (AAE09184)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö

The invention relates to movel HER-2 (herstatin-2) antagonist particularly a polypeptide that binds to the extracellular domain (ECD) of HER-2 at a site that is different from the binding site of humanised antibody, Herceptin, at an affinity of at least 10.8. The present invention is based upon the initial discovery of an alternative HER-2 mena transcript with 274 bp insert of intron 8. The translation product of the alternative transcript is a truncated HER-2 protein designated p68HER-2 but contains ECD i, II of the p185HER-2 and the novel ECDIIIa. The HER-2 receptor. The peptides bind tightly to, and thus antagonise the HER-2 receptor. The peptides, which bind to an HER-2 ECD, and the nucleic acids encoding these are useful to treat, diagnose and identify solld tumours. The present sequence is p68HER-2 ECDIIIa variant encoded by polymorphic form of human HER-2 intron 8. Note: The present sequence is not shown in the specification but is derived from HER-2 intron 8 encoded ECDIIIa sequence given in figure 8 (AAB09184)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New polypeptide, which binds to the extracellular domain of {\tt HER-2} for the treatment of hard tumors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                 /note= "p68HER-2 ECDIIIa (AAE09184) Asp substituted with

The invention relates to novel HER-2 (herstatin-2) antagonist
particularly a polypeptide that binds to the extracellular domain (ECD)
CC of HER-2 at a site that is different from the binding site of humanised
CC antibody, Herceptin, at an affinity of at least 10.8 The present
invention is based upon the initial discovery of an alternative HER-2
invention is based upon the initial discovery of an alternative HER-2
invention is based upon the initial discovery of an alternative HER-2
invention is based upon the initial discovery of an alternative HER-2
invention is based upon the initial discovery of an alternative HER-2
invention is based upon the initial discovery of an alternative HER-2
CC MENA transformed and intracellular domains of p185HER-2 but contains ECD I, II of the p185HER-2 and the novel ECDIIIa.
CT The ECDIIIA-containing polypeptides bind tightly to, and thus antagonise the HER-2 receptor. The peptides, which bind to an HER-2 ECD; and the nucleic acids encoding these are useful to treat, diagnose and identify solid tumours. The present sequence is p68HER-2 ECDIIIa variant encoded by polymorphic form of human HER-2 intron 8. Note: The present sequence is not shown in the specification but is derived from HER-2 intron 8 encoded ECDIIIa sequence given in figure 8 (AAE09184)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New polypeptide, which binds to the extracellular domain of HBR-2 for the treatment of hard tumors.

The extracellular domain of p185-HER-2 is proteolytically shed from breast carcinoma cells in culture and is found in serum of some cancer patients and may be a serum marker of metastatic breast cancer. An alternative HER card intron is in-frame and encodes a 79 amino acid extension designated ECDILIa (the present sequence), which is inserted at residue concinging the protein (approximately 68 kba) that lacks the transmembrane and introvision (approximately 68 kba) that lacks the transmembrane and introvision of the protein (approximately 68 kba) that lacks the transmembrane and introvision of the protein (approximately FBR-2). It could therefore block dimerization of p185-HER-2. The p68HER-2 polypeptide binds to a site on the ECD of HER-2 chart is different from the site of binding for Herceptin (RTW) (a marketed humanized monoclonal antibody that is used for the treatment of cancer and binds to the ECD of HER-2). The methods, compositions, polypeptides and antibodies are used to treat solid tumours such as breast cancer, small cell lung carcinoma, ovarian cancer and/or colon cancer, especially where over-expression of HER-2 is indicated

The invention relates to novel HER-2 (herstatin-2) antagonist particularly a polypeptide that binds to the extracellular domain (ECD) of HER-2 at a site that is different from the binding site of humanised antibody. Herceptin, at an affinity of at least 10°8. The present invention is based upon the initial discovery of an alternative HER-2 mRNA transcript with 274 bp insert of intron 8. The translation product of the alternative transcript is a truncated HER-2 protein designated p68HER-2 which lacks the transmembrane and intracellular domains of the ECDIIA-containing Polypeptides bind tightly to, and thus antagonise the HER-2 receptor. The peptides bind tightly to, and thus antagonise the HER-2 receptor. The peptides bind tightly to, and thus antagonise conclide second the second to the second the secon
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New polypeptide, which binds to the extracellular domain of HER-2 for the treatment of hard tumors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     9

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 数公益的数据
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to a method for treating a solid tumour characterised by endochelial growth factor receptor (BGFR) expression. The method involves administering an agent that binds to an extracellular domain (BCD) of BGFR. The invention also relates to an acturally occurring inhibitor of HBR-2 receptor tyrosine kinase called herstatin. The co-syrpession of herstatin with p185HRR2 causes a striking reduction in cell growth that corresponds with suppression of p185 autophosphorylation. The method or a pharmaceutical composition is useful for treating a solid cumour (selected from squamous cell carcinoma, colon carcinoma and glial cell tumour) characterised by BGFR expression. The present sequence is a protein encoded by human HER2 introm 8
                                                                                                                                Human, tumour; endothelial growth factor receptor; EGFR; cytostatic; herstatin; HER-2 receptor tyrosine kinase; squamous cell carcinoma; lung; colon; glial cell tumour; cell growth.

The invention relates to nove! HER-2 (herstatin-2) antagonist particularly a polypeptide that binds to the extracellular domain (ECD) of HER-2 at a site that is different from the binding site of humanised antibody, Herceptin, at an affinity of at least 10'8. The present invention is based upon the initial discovery of an alternative HER-2 means termative transcript with 274 bp insert of intracellular domains of p6HER-2 with Lars the transmembrane and intracellular domains of p6HER-2 but contains ECD 1. II of the p18HER-2 and the novel ECDIIIa. The ECDIIIA-containing polypeptides bind tightly to, and thus antagonise the HER-2 receptor. The peptides, which bind to an HER-2 ECD, and the nucleic acids encoding these are useful to treat, diagnose and identify solid tumours. The present sequence is p6HER-2 ECDIIIa variant encoded is not shown in the specification but is derived from HER-2 intron 8 encoded ECDIIIa sequence given in figure 8 (AAE09184)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New polypeptide, which binds to the extracellular domain of HER-2 for the treatment of hard tumors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   9

The invention relates to novel HBR-2 (herstatin-2) antagonist

particularly a polypeptide that binds to the extracellular domain (BCD)

of HBR-2 at a site that is different from the binding site of humanised

antibody, Herceptin, at an affinity of at least 10.8. The present

invention is based upon the initial discovery of an alternative HER-2

mRNA transcript with 274 bp insert of intron 8. The translation product

of the alternative transcript is a truncated HER-2 protein designated

p68HER-2 which lacks the transmembrane and intracellular domains of

p185HER-2 but contains ECD I, II of the p185HER-2 protein designated

the HER-2 receptor. The peptides bind tightly to, and thus antagonise

the HER-2 receptor. The peptides, which bind to an HER-2 ECD, and the

nucleic acids encoding these are useful to treat, diagnose and identify

solid tumours. The present sequence is p68HER-2 ECDIII a variant encoded

by polymorphic form of human HER-2 intron 8 Note: The present sequence

is not shown in the specification but is derived from HER-2 intron 8

encoded ECDIIIa equence given in figure 8 (AAB09184)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New polypeptide, which binds to the extracellular domain of HER-2 for the treatment of hard tumors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1 GTHSILPRPAAVPVPIRMQPGPAHPVISFIRPSWDLVSAFYSLPLAPISPTSVPISPVSV 60

The invention relates to novel HER-2 (herstatin-2) antagonist particularly a polypeptide that binds to the extracellular domain (ECD) of HER-2 at site that is different from the binding site of humanised antibody, Herceptin, at an affinity of at least 10'8 The present invention is based upon the initial discovery of an alternative HER-2 mentative transcript with 274 bp insert of intron B. The translation product of the alternative transcript is a truncated HER-2 protein designated p68HER-2 but contains BCD I, II of the p185HER-2 and the novel BCDIIIa. The HER-2 receptor. The peptides bind tightly to, and thus antagonise the HER-2 receptor. The peptides, which bind to an HER-2 ECD, and the nucleic acids encoding these are useful to treat, diagnose and identify solid tumours. The present sequence is p68HER-2 ECDIIIA variant encoded by polymorphic form of human HER-2 intron 8. Note: The present sequence is not shown in the specification but is derived from HER-2 intron 8 encoded ECDIIIa sequence given in figure 8 (AAE09184)
                                                                                                                                                                                                                                                                                                                                                                                                          New polypeptide, which binds to the extracellular domain of HER-2 for the treatment of hard tumors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               60

The invention relates to novel HER-2 (herstatin-2) antagonist particularly a polypeptide that binds to the extracellular domain (ECD) of HER-2 at a site inta different from the binding site of humanised antibody, Herceptin, at an affinity of at least 10'8. The present invention is based upon the initial discovery of an alternative HER-2 ment to a least 10'8. The present of the alternative transcript is a truncated HER-2 protein designated to 69 the alternative transcript is a truncated HER-2 protein designated of the alternative transcript is a truncated HER-2 protein designated of 185HER-2 but contains ECD I. II of the plasHER-2 and the novel ECDIIIa. The ECDIIIA-containing polypeptides bind tightly to, and thus antagonise the HER-2 receptor. The peptides, which bind to an HER-2 ECDIIIa variant encoded cold tumours. The present sequence is p68HER-2 ECDIIIa variant encoded is not shown in the specification but is derived from HER-2 intron 8 encoded ECDIIIa sequence given in figure 8 (AAE09184)
                                                                                                                                                                                                                                                                                                                                                                                                                                                      New polypeptide, which binds to the extracellular domain of HER-2 for the treatment of hard tumors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 9

The invention relates to novel HER-2 (herstatin-2) antagonist particularly a polypeptide that binds to the extracellular domain (ECD) of HER-2 at a site that is different from the binding site of humanised antibody, Herceptin, at an affinity of at least 10.8. The present invention is based upon the initial discovery of an alternative HER-2 mRNA transcript with 274 bp insert of intron 8. The translation product of the alternative transcript is a truncated HER-2 protein designated p84HER-2 which lacks the transmembrane and intracellular domains of p185HER-2 but contains BCD I, II of the p185HER-2 and the novel BCDIIIa. The HER-2 receptor. The peptides which bind to an HER-2 ECD, and then once the HER-2 receptor. The peptides, which bind to an HER-2 ECD, and the nucleic acids encoding these are useful to treat, diagnose and identify solid tumours. The present sequence is p68HER-2 ECDIIIA variant encoded by polymorphic form of human HER-2 intron 8. Note: The present sequence is not shown in the specification but is derived from HER-2 intron 8 encoded ECDIIIa sequence given in figure 8 (AAE09184)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                          New polypeptide, which binds to the extracellular domain of HER-2 for the treatment of hard tumors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          9

The invention relates to novel HER-2 (herstatin-2) antagonist particularly a polypeptide that binds to the extracellular domain (BCD) of HER-2 at a site that is different from the binding site of humanised antibody, Herceptin, at an affinity of at least 10.8. The present invention is based upon the initial discovery of an alternative HER-2 mRNA transcript with 274 bp insert of introm 8. The translation product of the alternative transcript is a truncated HER-2 protein designated p68HER-2 but contains ECD i. II of the p168HER-2 and the novel ECDIIIa. The HER-2 receptor. The peptides bind tightly to, and thus antagonise the HER-2 receptor. The peptides, which bind to an HER-2 ECD, and the nucleic acids encoding these are useful to treat, diagnose and identify solid tumours. The present sequence is p68HER-2 ECDIIIa variant encoded by polymorphic form of human HER-2 introm 8 Note: The present sequence is not shown in the specification but is derived from HER-2 introm 8 encoded ECDIIIa sequence given in figure 8 (AAE09184)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                             New polypeptide, which binds to the extracellular domain of HER-2 for the treatment of hard tumors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   9

The invention relates to novel HER-2 (herstatin-2) antagonist particularly a polypeptide that binds to the extracellular domain (ECD) of HER-2 at a site that is different from the binding site of humanised antibody, Herceptin, at an affinity of at least 10°8. The present invention is based upon the initial discovery of an alternative HER-2 mRNA transcript with 274 bp insert of intron 8. The translation product of the alternative transcript is a truncated HER-2 protein designated of the alternative transcript is a truncated HER-2 protein designated in BSHER-2 but contains ECD I. II of the p185HER-2 and the novel ECDIII. The ECDIIIA-containing polypeptides bind tightly to, and thus antagonise the ECDIIIA-containing polypeptides, which bind to an HER-2 ECDIIIa antagonise colid tumours. The persent sequence is p68HER-2 ECDIIIa variant encoded solid tumours. The present sequence is p68HER-2 ECDIIIa variant encoded is not shown in the specification but is derived from HER-2 intron 8 encoded ECDIIIa sequence given in figure 8 (AAEG9184)

```
The invention relates to novel HER-2 (herstatin-2) antagonist particularly a polypeptide that binds to the extracellular domain (ECD) of HER-2 at a site that is different from the binding site of humanised antibody, Herceptin, at an affainty of at least 10.8. The present invention is based upon the initial discovery of an alternative HER-2 mRNA transcript with 274 bp insert of intron 8. The translation product of the alternative translation product pseHER-2 which lacks the transmembrane and intracellular domains of pseHER-2 but contains ECD i, II of the p185HER-2 and the novel ECDIIIa. The HER-2 receptor. The peptides, which bind to an HER-2 ECD, and the nucleic acids encoding these are useful to treat diagnose and identify solid tumours. The present sequence is pseHER-2 ECDIII avainat encoded by polymorphic form of human HER-2 intron 8. Note: The present sequence is not shown in the specification but is derived from HER-2 intron 8 cooded ECDIIIa sequence given in figure 8 (AAE09184)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               : GTHSLLPRPAAVPVPLRMQPGPAHPVLSFLRPSWDLVSAFYSLPLAPLSPTSVPISPVSV 60

The invention relates to novel HER-2 (herstatin-2) antagonist particularly a polypeptide that binds to the extracellular domain (ECD) particularly a polypeptide that binds to the extracellular domain (ECD) of HER-2 at a site that is different from the binding site of humanised antibody, Herceptin, at an affinity of at least 10.8. The present invention is based upon the initial discovery of an alternative HER-2 invention is based upon the initial discovery of an alternative HER-2 of the alternative transcript is a truncated HER-2 protein designated be SHER-2 but contains ECD I is a truncated HER-2 protein designated p8.8HER-2 but contains ECD I, II of the p18.5HER-2 protein designated p18.5HER-2 but contains ECD I, II of the p18.5HER-2 much and then novel ECDIIIa. The HER-2 receptor. The peptides which bind to an HER-2 ECD, and the nucleic acids encoding these are useful to treat, diagnose and identify solid tumours. The present sequence is p68.8HER-2 ECDIIIA variant encoded by polymorphic form of human HER-2 intron 8. Note: The present sequence is not shown in the specification but is derived from HER-2 intron 8 encoded ECDIIIa sequence given in figure 8 (AAE09184)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ô
                                                                                                                                                                                                                                                                                                                                                                                                                                         New polypeptide, which binds to the extracellular domain of HER-2 for the treatment of hard tumors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  1 CTHSLLERPAAVPVPLRMQPGPAHPVLSFLRPSWDLVSAFYSLPLAPLSPTSVPISPVSV 60

                                                                                                                                                         Domain
The invention relates to novel HER-2 (herstatin-2) antagonist particularly a polypeptide that binds to the extracellular domain (ECD) of HER-2 at a site that is different from the binding site of humanised antibody, Herceptin, at an affinity of at least 10.8 The present invention is based upon the initial discovery of an alternative HER-2 mRNA transcript with 274 bp insert of intron 8. The translation product of the alternative translation as a truncated HER-2 protein designated p68HER-2 which lacks the transmembrane and intracellular domains of p185HER-2 but contains BCD I II of the p185HER-2 and the novel BCDIIIa. The BCDIIIA-containing polypeptides bind tightly to, and thus antagonise the HER-2 receptor. The peptides, which bind to an HER-2 ECD, and the nucleic acids encoding these are useful to treat, diagnose and identify solid tumours. The present sequence is p68HER-2 ECDIIIA variant encoded by polymorphic form of human HER-2 intron 8. Note: The present sequence is not shown in the specification but is derived from HER-2 intron 8 concoded ECDIIIa sequence given in figure 8 (AAE09184)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                New polypeptide, which binds to the extracellular domain of HER-2 for the treatment of hard tumors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  9

```

Human p68HER-2 generic protein variant 11.

```
New polypeptide, which binds to the extracellular domain of HER-2 for the treatment of hard tumors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to novel HER-2 (herstatin-2) antagonist particularly a polypeptide that binds to the extracellular domain (ECD) of HER-2 at a site that is different from the binding site of humanised antibody, Herceptin, at an affinity of at least 10°8. The present invention is based upon the initial discovery of an alternative HER-2 mRNA transcript with 74 bp insert of intron 8. The translation product of the alternative transcript is a truncated HER-2 protein designated p68HER-2 which lacks the transmembrane and intracellular domains of p185HER-2 but contains BCD I, II of the p165HER-2 and the novel BCDIIIa. The ECDIIIA-containing polypeptides bind tightly to, and thus antagonise the HER-2 receptor. The peptides, which bind to an HER-2 ECD, and the nucleic acids encoding these are useful to treat, diagnose and identify
                                                                                                                                                                                                                                                                                                                                                                                               /note= "Represented as Agn in the parent sequence shown in the specification" 341. 419 /label= ECDIILa variant /note= "Extracellular domain IIIa variant"

The invention relates to novel HER-2 (herstatin-2) antagonist particularly a polypeptide that binds to the extracellular domain (ECD) of HER-2 at a site that is different from the binding site of humanised antibody, Herceptin, at an affinity of at least 10.8. The present invention is based upon the initial discovery of an alternative HER-2 mRNA transcript with 274 bp insert of intron 8. The translation product of the alternative transcript is a truncated HER-2 protein designated p68HER-2 which lacks the transmembrane and intracellular domains of p68HER-2 but contains ECD I, II of the p185HER-2 and the novel ECDIIIa. The HER-2 receptor. The peptides bind tightly to, and thus antagonise the HER-2 receptor. The peptides which bind to an HER-2 ECD, and the nucleic acids encoding these are useful to treat, diagnose and identify solid tumours. The present sequence is human p68HER-2 generic protein containing ECDIIIa variant sequence. Note: The present sequence is not shown in the specification but is derived from p68HER-2 generic sequence (SEQ ID NO:2) shown in the sequence listing (AAB09181)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    400

The invention relates to novel HER-2 (herstatin-2) antagonist particularly a polypeptide that binds to the extracellular domain (ECD) of HER-2 at a site that is different from the binding site of humanised antibody, Herceptin, at an affinity of at least 10.8. The present invention is based upon the initial discovery of an alternative HER-2 mRNA transcript with 274 bp insert of intron 8. The translation product of the alternative transmembrane and intracellular domains of p88HER-2 but contains BCD I, II of the p185HER-2 protein designated p68HER-2 but contains BCD I, II of the p185HER-2 and the novel BCDIIIa. The FER-2 receptor. The peptides bind tightly to, and thus antagonise the HER-2 receptor. The peptides, which bind to an HER-2 ECD, and the nucleic acids encoding these are useful to treat, diagnose and identify solid tumours. The present sequence: Shown an BCDIIIa variant sequence. Note: The present sequence is not containing BCDIIIa variant sequence. Note: The present sequence is not shown in the specification but is derived from p68HER-2 generic sequence is containing BCDIIIa variant sequence listing (AAEO9181)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New polypeptide, which binds to the extracellular domain of HER-2 for the treatment of hard tumors.

```
HER-2/neu (erbB-2) oncogene encodes a receptor-like tyrosine kinase. The extracellular domain of p185-HER-2 is proteolytically shed from breast carcinoma cells in culture and is found in serum of some cancer patients and may be a serum marker of metastatic breast cancer. An alternative HER-2 mRNA of 4.8 kb with a 274 bp insert (intron 8) has been identified. The retained intron is in-frame and encodes a 79 amino acid extension designated ECDIIIa (the present sequence), which is inserted at residue 340 of p185-HER-2. The alternative mRNA predicts a truncated HER-2 protein (approximately 68 kDa) that lacks the transmembrane and intracellular domains (see AAY97240). p68HER-2 specifically binds to p185-HER-2 without activating HER-2. it could therefore block dimerization of p185-HER-2. The p68HER-2 polypeptide binds to a site on
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Using polypeptides and antibodies that bind to the extracellular domain of the receptor-like tyrosine kinase HER-2 to treat solid tumors of the breast, lung, ovaries and colon.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Clinton GM, Adelman JP;

the ECD of HER-2 that is different from the site of binding for Eerceptin (RTM) (a marketed humanized monoclonal antibody that is used for the treatment of cancer and binds to the ECD of HER-2). The methods, compositions, polypeptides and antibodies are used to treat solid tumours such as breast cancer, small call lung carcinoma, ovarian cancer and/or colon cancer, especially where over-expression of HER-2 is indicated

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to novel HER-2 (herstatin-2) antagonist of HER-2 at a site that is different binds to the extracellular domain (ECD) of HER-2 at a site that is different from the binding site of humanised antibody, Herceptin, at an affinity of at least 10°8. The present invention is based upon the initial discovery of an alternative HER-2 the AL attendant of the alternative transcript is a truncated HER-2 protein designated of the alternative transcript is a truncated HER-2 protein designated pl85HER-2 which lacks the transmembrane and intracellular domains of pl85HER-2 but contains ECD I. I of the pl85HER-2 and the novel ECDIIIa. The ECDIIIA-containing polypeptides bind tightly to, and thus antagonise the HER-2 receptor. The peptides, which bind to an HER-2 ECD, and the nucleic acids encoding these are useful to treat, diagnose and identify solid tumours. The present sequence is human p68HER-2 ECDIIIa peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          60

The present invention relates to a method for treating a solid tumour characterised by endothelial growth factor receptor (EGFR) expression. The method involves administering an agent that binds to an extracellular domain (ECD) of EGFR. The invention also relates to an acturally occurring inhibitor of HBR-2 receptor tyrosine kinase called herstatin. The co-spream of herstatin with pl85HBR2 causes a striking reduction in cell growth that corresponds with suppression of pl85 autophosphorylation. The method or a pharmaceutical composition is useful for treating a solid carcinoma and glial cell tumour (sealected from gramour) characterised by EGFR expression. The present sequence is a protein encoded by human HBR2 intron 8 polymorphic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Treating solid tumor characterized by expression of endothelial growth factor receptor, involves administering recombinant herstatin that binds to extracellular domain of the endothelial growth factor receptor.

```
New polypeptide, which binds to the extracellular domain of HER-2 for the treatment of hard tumors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to novel HER-2 (herstatin-2) antagonist particularly a polypeptide that binds to the extracellular domain (ECD) of HER-2 at a site that is different from the binding site of humanised antibody, Herceptin, at an affinity of at least 10'8. The present invention is based upon the initial discovery of an alternative HER-2 mRNA transcript with 274 bp insert of intron 8. The translation product

of the alternative transcript is a truncated HER-2 protein designated BBERR2- which lacks the transmembrane and intracellular domains of p185HER-2 but contains ECD I. II of the p185HER-2 and the novel ECDIIIa. The ECDIIIA-containing polypeptides bind tightly to, and thus antagonise the HRP-2 receptor. The peptides, which bind to an HER-2 ECD, and the nucleic acids encoding these are useful to treat, diagnose and identify solid tumours. The present sequence is human p68HER-2 generic protein containing ECDIIIA variant sequence. Note: The present sequence is not shown in the specification but is derived from p68HER-2 generic sequence (SEQ ID NO:2) shown in the sequence listing (AAB09181)
                                                                                                                                                                                      9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    /note= "Represented as Agn in the parent sequence shown in the specification"

The invention relates to novel HER-2 (herstatin-2) antagonist particularly a polypeptide that binds to the extracellular domain (ECD) of HER-2 at a site that is different from the binding site of humanised antibody, Herceptin, at an affinital discovery of an alternative HER-2 invention is based upon the initial discovery of an alternative HER-2 invention is based upon the initial discovery of an alternative HER-2 of the alternative transcript is a truncated HER-2 protein designated to the alternative transmembrane and intracellular domains of p185HER-2 but contains BCD I, II of the p185HER-2 protein designated p68HER-2 but contains BCD I, II of the p185HER-2 and the novel ECDIIIa. The HER-2 receptor. The peptides, which bind to an HER-2 ECD, and the nucleic acids encoding these are useful to treat, diagnose and identify solid tumours. The present sequence is human p68HER-2 generic protein containing ECDIIIa variant sequence. Note: The present sequence is not shown in the specification but is derived from p68HER-2 generic sequence is not shown in the specification but is derived from p68HER-2 generic sequence. (SEQ ID NO:2) shown in the sequence listing (AAE09181)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      341 GXHSXXPRPAAVPVPXRXQPXPAHPVLSFLRPSWDIVSAFYSLPLAPLDPTSVXISPVSV 400
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New polypeptide, which binds to the extracellular domain of HER-2 for the treatment of hard tumors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           HER-2, herstatin, antagonist; extracellular domain; ECD; Herceptin; solid tumour; cancer; polymorphism; cytostatic; gene therapy; p68HER-2;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                GTHSLLPRPAAVPVPLRMQPGPAHPVLSFLRPSWDLVSAFYSLPLAPLSPTSVPISPVSV

Herceptin, at an affinity of at least 10.8. The present invention is based upon the initial discovery of an alternative HER-2 mRNA transcript with 274 bp insert of intron 8. The translation product of the alternative transcript is a truncated HER-2 protein designated p68HER-2 which lacks the transmembrane and intracellular domains of p185HER-2 but contains BCD I, II of the p185HER-2 and the novel ECDIIIa. The HER-2 receptor. The peptides, which bind to an HER-2 ECD, and the nucleic acids encoding these are useful to treat, diagnose and identify solid tumours. The present sequence is human p68HER-2 generic protein containing ECDIIIa variant sequence is human p68HER-2 generic protein containing ECDIIIa variant sequence is human p68HER-2 generic protein containing ECDIIIa variant sequence in the present sequence is not shown in the specification but is derived from p68HER-2 generic sequence is not shown in the specification but is derived from p68HER-2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New polypeptide, which binds to the extracellular domain of HER-2 for the treatment of hard tumors.
                                                                                                                                                /note= "Represented as Agn in the parent sequence shown in the specification"

The invention relates to novel HER-2 (herstatin-2) antagonist particularly a polypeptide that binds to the extracellular domain (ECD) of HER-2 at a site that is different from the binding site of humanised antibody, Herceptin, at an affinity of at least 10°8. The present invention is based upon the initial discovery of an alternative HER-2 many transcript with 274 bp insert of intron 8. The translation product of the alternative transmendrane and intracellular domains of p885HER-2 but contains ECD I. Il of the p185HER-2 and the novel ECDIII. The ECDIIIA-containing polypeptides bind tightly to, and thus antagonise the ECDIIIA-containing polypeptides, which bind to an fER-2 ECD, and the nucleic acids encoding these are useful to treat, diagnose and identify solid tumours. The present sequence is human p68HER-2 generic protein shown in the specification but is derived from p68HER-2 generic sequence is not shown in the sequence listing (AAE09181) 400 which binds to the extracellular domain of HER-2 for the HER-2; herstatin, antagonist, extracellular domain; ECD; Herceptin; solid tumour; cancer; polymorphism; cytostatic; gene therapy; p68HER-2; ECDIIIa; variant. /note= "Represented as Agn in the parent sequence shown in the specification" /note= "Represented as Agn in the parent sequence shown in the specification" 1 GTHSLLPRPAAVPVPLRMQPGPAHPVLSFLRPSWDLVSAFYSLPLAPLSPTSVPISPVSV Gaps .340

LITERALIZED LEGACES LO NOVEL PREAT LEGISCHILE'S ALREAGEDING CONTRICTION FEATURED LOUNCE DESCRIPTION OF HERE 2 at a site that is different from the binding site of humanised antibody, Herceptin, at an affinity of at least 10% The present contribody. Herceptin, at an affinity of at least 10% The present contribody herceptin, at an affinity of at least 10% The present contribody herceptin, at an affinity of at least 10% The present of an alternative HER-2 many transcript with 24 bp insert of intron 8. The translation product of the alternative transcript is a truncated HER-2 protein designated to 68 HER-2 which lacks the transmembrane and intracellular domains of persons and intracellular domains of the ECDIIIA-containing polypeptides bind tightly to, and thus antagonise the HER-2 receptor. The peptides, which bind to an HER-2 ECD, and the nucleic acids encoding these are useful to treat, diagnose and identify solid tumours. The present sequence is human posses. 2 generic protein containing ECDIIIA variant sequence. Note: The present sequence is not shown in the specification but is derived from posses.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New polypeptide, which binds to the extracellular domain of HER-2 for the treatment of hard tumors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to novel HER-2 (herstatin-2) antagonist

Patent No. 6610836
GENERAL INFORMATION
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO KLEESIELLA
TITLE OF INVENTION: NUCLEIC ACID AND THERAPEUTICS
TITLE OF INVENTION: NUMBER: US/09/489,039A
CURRENT RILING DATE: 1090-01-27
PRIOR APPLICATION NUMBER: US 60/117,747
PRIOR PELICATION NUMBER: US 60/117,747
PRIOR FILING DATE: 1999-01-29
NUMBER OF SEQ ID NOS: 14342
LENGTH: 183
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                83 WORLPALL-LPVRPLWILPPRRPWOPLLOPASAAPSLLSPLPAPAAPVRAVSAVPVPPP 141

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             US-09-666-316-2

Sequence 2, Application US/09686316

Patent No. 664515;
GENERAL INFORMATION:
TITLE OF INVENTION: Methods for Treating Diabetes Mellitus
TITLE OF INVENTION: Methods for Treating Diabetes Mellitus
FILE REFERENCE: SALEA650-1
CURRENT APPLICATION NUMBER: US/09/686,316
CURRENT PILING DATE: 2000-10-10
PRIOR FILING DATE: 1997-10-31
PRIOR FILING DATE: 1997-10-31
PRIOR FILING DATE: 1994-02-10
NUMBER OF SEQ ID NOS: 4
                                                                                                                                                                                                                         Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        33; Indele
